

# Faux Pumpkin Planter

## Included Supplies:

- 1 foam pumpkin
- 1 – 2 oz. white acrylic paint
- 1 foam brush
- 3 faux succulents
- Spanish moss

## Needed Supplies:

- Clear drying glue

## Instructions:

1. Remove the stem from the foam pumpkin.
2. Using the foam brush, paint the pumpkin white. You may need a couple of coats to completely cover the orange, so let it dry and apply a second coat of paint.
3. Once dry, apply your glue to the top of the pumpkin and adhere the moss. Moss should be applied in a thin layer, not clumps so you can attach your succulent.
4. Apply a bit of glue to the end of the faux succulent picks and insert into pumpkin through the moss. If desired, apply dabs of glue and adhere more moss to fill in any gaps.
5. Let dry.
